

Question No: 1

\_\_\_\_\_ cipher does not replace the original text with different text, but rather moves the original values around. It re-arranges the bits, characters, or blocks of characters to hide the original meaning.

Options:

Substitution

XORing

Transposition

Transportation

Question No: 2

Which of the following provides cryptographic privacy and authentication for data communication?

Options:

PGP

sslsan

DRA

Truecrypt

Question No: 3

\_\_\_\_\_ is mono-alphabetic substitution while \_\_\_\_\_ is not

Options:

Caesar, Vigenere

Vigenere , Caesar

MD4, MD5

MD5, MD4

Question No: 4

Which of the following is a quick way to compare the accuracy of biometric devices?

Options:

Cross error requirement

Equal Error Rate

Cross Exception Rate

Crisis Error Rate

Question No: 5

Science of studying and breaking the secrecy of encryption processes, compromising authentication schemes, and reverse-engineering algorithms and

keys.

Options:

☐

Cryptology

☐

Cryptanalysis

☐

Encryption

☐

Cryptosystem

Question No: 6

Which of the following is standard for PKI?

Options:

☐

X.509

☐

X.511

☐

X.508

☐

All of the above

Question No: 7

Which of the following describes the difference between the Data Encryption Standard and the Rivest-Shamir-Adleman algorithm?

Options:

☐

DES is symmetric, while RSA is asymmetric.

☐

DES is asymmetric, while RSA is symmetric

☐

They are hashing algorithms, but RSA produces a 160-bit hashing value.

☐

DES creates public and private keys, while RSA encrypts messages.

Question No: 8

HMAC-SHA1 can be used for providing

Options:

☐

Only Confidentiality

☐

Availability and accountability

☐

Only Non Repudiation

☐

Integrity and Authenticity

Question No: 9

Public and private key pairs are

Options:

☐

Mathematically independent

☐

Mathematically dependent

Both are not related at all

Both a and b

Question No: 10

Which of the following enables you to take advantage of all the information already existing on Root CA

Options:

Domain Controller

Network Enrollment Device

Subordinate CA

Online Responder

Question No: 11

TLS and SSL encrypts the segments of network connections at

Options:

Application Layer

Datalink Layer

Physical Layer

Session Layer

Question No: 12

El-Gamal Algorithm is based on \_\_\_\_\_

Options:

factoring problem

discrete logarithms

discrete mathematics

None of the above

Question No: 13

Another name for cryptography strength

Options:

Packet length

Cryptographic Key

Key Exchange Factor

### Work Factor

Question No: 14

What does .pem file extension refers to?

Options:

PKI Encrypted Mail

Privacy Enhanced Mail

Public Encryption Mail

Private Enclosed Mail

Question No: 15

DES is derived from \_\_\_\_\_

Options:

AES

IBM MARS

Lucifer

None of the above

Question No: 16

RSA algorithm is based on \_\_\_\_\_

Options:

factoring problem

discrete logarithms

discrete mathematics

None of the above

Question No: 17

How many keys are required if 25 people want to communicate with each other using Symmetric key?

Options:

25

50

600

300

Question No: 19

Which key is used for encryption?

Options:

Private

Secret

Public

Unique

Question No: 20

Which of the following contains revoked certificate list information?  
ptions:

URL

CRL

Domain Controller

Digital Certificate

Question No: 21

Which of the following is not a hash algorithm  
Options:

md5

sha-1

IDEA

Tiger

Question No: 22

What kind of algorithm uses same key for encryption and decryption?  
Options:

Hashing

PKI

Asymmetric

Symmetric

Question No: 23

How many rounds of iteration is done in AES depending on key size?  
Options:

9,10 and 11

10,11 and 15

10,12 and 14

9, 12 and 15

Question No: 24

What can be used to achieve message integrity?

Options:

Hash

Certificate

public key

private key

Question No: 25

Random data that are used as an additional input to one-way function that hashes a password is known as \_\_\_\_\_

Options:

Sugar

Salt

Random Number

Padding

Question No: 26

Which of the following service enables routers and Switches to be authenticated in a network?

Options:

Online Responder

Auto Enrollment Service

Network Device Enrollment Service

Web Enrollment

Question No: 26

Which of the following service enables routers and Switches to be authenticated in a network?

Question No: 27

Identify the strengths of Symmetric Algorithms

ptions:

Much slower than Public key systems

Much slower than asymmetric systems

Hard to break if using a large key size

Easy to break if using a large key size

Question No: 28

Default port for HTTPS is \_\_\_\_\_

Options:

☐

80

☐

8080

☐

443

☐

445

Question No: 29

Which of the following provide an enrollment mechanism for organizations that need to issue and renew certificates for users and computers that are not joined to the domain?

Options:

☐

Auto Enrollment

☐

Web Enrollment

☐

Certificate Enrollment

☐

None of the above

Question No: 30

In a \_\_\_\_\_ substitution cipher, multiple alphabets are used to substitute another.

Options:

☐

Poly Alphabetic

☐

Mono Alphabetic

☐

Symmetric

☐

None of the above

Question No: 31

Who issues digital Certificates?

Options:

☐

Domain Controller

☐

GPO

☐

Certificate Authority

☐

OCSP

Question No: 32

How many bits make up the effective length of the DES key?

Options:

☐

56

☐

64

☐

32

☐

128

Question No: 33

Preventing unauthorized access to information system is known as\_\_\_\_\_

Options:

☐

Confidentiality

☐

Integrity

☐

Availability

☒

Authentication

Question No: 34

Which one of the following is the key size of the IDEA symmetric key algorithm?

Options:

☐

64 bits

☐

256 bits

☐

128 bits

☐

all of the above

Question No: 35

The secure hash algorithm (SHA-1) generates a fixed-length output for a variable length input file. What is the length in bits of the fixed-length output

Options:

☐

64bits

☐

128 bits

☐

160 bits

☐

256 bits

Question No: 36

Which of the following is not true about symmetric key Encryption?

ptions:

☐

It uses only one key to encrypt and decrypt

☐

Much slower than Asymmetric

☐

Key distribution is a problem

Key maintenance is a problem

Question No: 37

Which is known as Caesar Cipher on Steroids

Options:

Hieroglyphs

Atbash

Vigenere

Scytale

Question No: 38

MD5 is a \_\_\_\_\_

Options:

hash function

public key algorithm

secret key algorithm

used only in cryptanalysis

Question No: 39

Which of the following is created as an alternative to CRL?

Options:

OCSP

Registration Authority

SSL

None of the above

Question No: 40

Which of the following provides cryptographic privacy and authentication for data communication?

Options:

PGP

Sslscan

DRA

Truecrypt
